

## **Comments on Assignment # 1**

1. Do not include too many numbers after the decimal. Example: use 4.56 instead of 4.558342317. See how this is done in the example tables provided.
2. When working together, do not submit exactly the same models. Have at least one variable that is different.
3. Follow the example Tables EXACTLY. Including format and the way variables are described.
4. The travel time variable cannot be used as an explanatory variable in any form. If you do not fully understand why please see me.
